

## js\scripts.js

```
1 // Sample JavaScript for handling form submission (login/signup)
2
3 document.addEventListener('DOMContentLoaded', function () {
4     // Get references to form elements
5     const loginForm = document.getElementById('loginForm');
6     const signupForm = document.getElementById('signupForm');
7
8     // Event listener for login form submission
9     loginForm.addEventListener('submit', function (event) {
10         event.preventDefault();
11         // Perform login logic (validate credentials, redirect, etc.)
12         console.log('Login logic goes here');
13     });
14
15     // Event listener for signup form submission
16     signupForm.addEventListener('submit', function (event) {
17         event.preventDefault();
18         // Perform signup logic (create account, store data, etc.)
19         console.log('Signup logic goes here');
20     });
21
22     // Additional JavaScript logic for other functionalities
23     // Add event listeners and functions for services like fund transfer, balance check,
    etc.
24 });
```
